

Patric Pop

Full-Stack Developer

(+40) 0745235833 | patric.pop13@gmail.com | github.com/patric1304 | patric-pop.vercel.app | Timișoara, Romania
Romanian (EU citizen)

PROFESSIONAL SUMMARY

Full-stack developer with hands-on Spring Boot and Angular experience from a production internship. Builds web applications, ML pipelines, and IoT systems using Java, Python, and TypeScript. Computer Science student at Politehnica Timișoara entering final year. Seeking remote junior developer roles.

WORK EXPERIENCE

Full-Stack Developer Intern

Jun 2025 — Sep 2025

HiByte (Hibyte Intelli SRL) · Timișoara, Romania

- Built REST API endpoints using Spring Boot for a multi-tenant web application, implementing CRUD operations with PostgreSQL
- Developed responsive Angular frontend components with dynamic data binding and reactive forms
- Containerized development environment with Docker, reducing onboarding setup time for new team members
- Collaborated in an Agile/Scrum team with daily standups, sprint planning, and code reviews
- Received formal recommendation letter from company administrator for technical contributions and reliability

EDUCATION

Bachelor's Degree in Computer Science & Automation

Oct 2023 — Present (exp. 2027)

Universitatea Politehnica Timișoara

TECHNICAL SKILLS

Languages:

Java

Python

C/C++

JavaScript

TypeScript

C#

SQL

HTML

CSS

Backend:

Spring Boot

REST APIs

PostgreSQL

Supabase

Frontend:

Angular

React

Next.js

HTML5/CSS3

ML / AI:

PyTorch

TensorFlow

Jupyter Notebooks

Pandas

NumPy

DevOps:

Docker

Git

GitHub Actions

Vercel

Tools:

VS Code

IntelliJ IDEA

Microsoft Office

PROJECTS

AI Stock Price Predictor — Python, PyTorch, TensorFlow

- Built a hybrid ML pipeline combining historical price data with sentiment analysis scores fed into a neural network
- Implemented smart caching layer to optimize API usage and reduce redundant data fetching

github.com/patric1304/Stock-price-prediction-model

CollabCode — Real-time Collaborative Coding Platform — iTEC Hackathon, Team project

- Built during iTEC hackathon: full-stack collaborative coding platform with real-time editing
- Integrated Docker-based secure code execution, Supabase auth/data sync, and Gemini AI-assisted workflows

github.com/AlexandruCL/iTEC_2026

Water Quality IoT Monitoring System — Python, IoT

- Developed IoT-based water quality monitoring system with sensor data collection and analysis

github.com/patric1304/Water-quality-IOT-project

Echoes — Digital Heritage Trail — JavaScript, PLpgSQL, CSS

- Built a digital heritage trail platform during a hackathon, enabling users to explore cultural landmarks through an interactive web experience
- Implemented backend logic with PLpgSQL stored procedures and a JavaScript frontend for dynamic content rendering

github.com/ionutT77/Echoes-Digital-Heritage-Trail
